

Patterns d'intégration

Middleware 3 – Licence MOIE

Olivier COUPELON - coupelon@isima.fr

Patterns

Patterns

Exemple reproductible

Répond à un cas d'usage courant

Les grands types de patterns

- Design Patterns
 - Observer
 - Publish/Subscribe
- Architecture Patterns
 - Service Oriented Architecture
 - Extraction Transformation & Loading
 - Enterprise Application Integration
- Solutions Patterns
- Concurrency Patterns

... et bien d'autres :

[http://en.wikipedia.org/wiki/Pattern \(software\)](http://en.wikipedia.org/wiki/Pattern_(software))

Enterprise Application Integration

Enterprise Application Integration

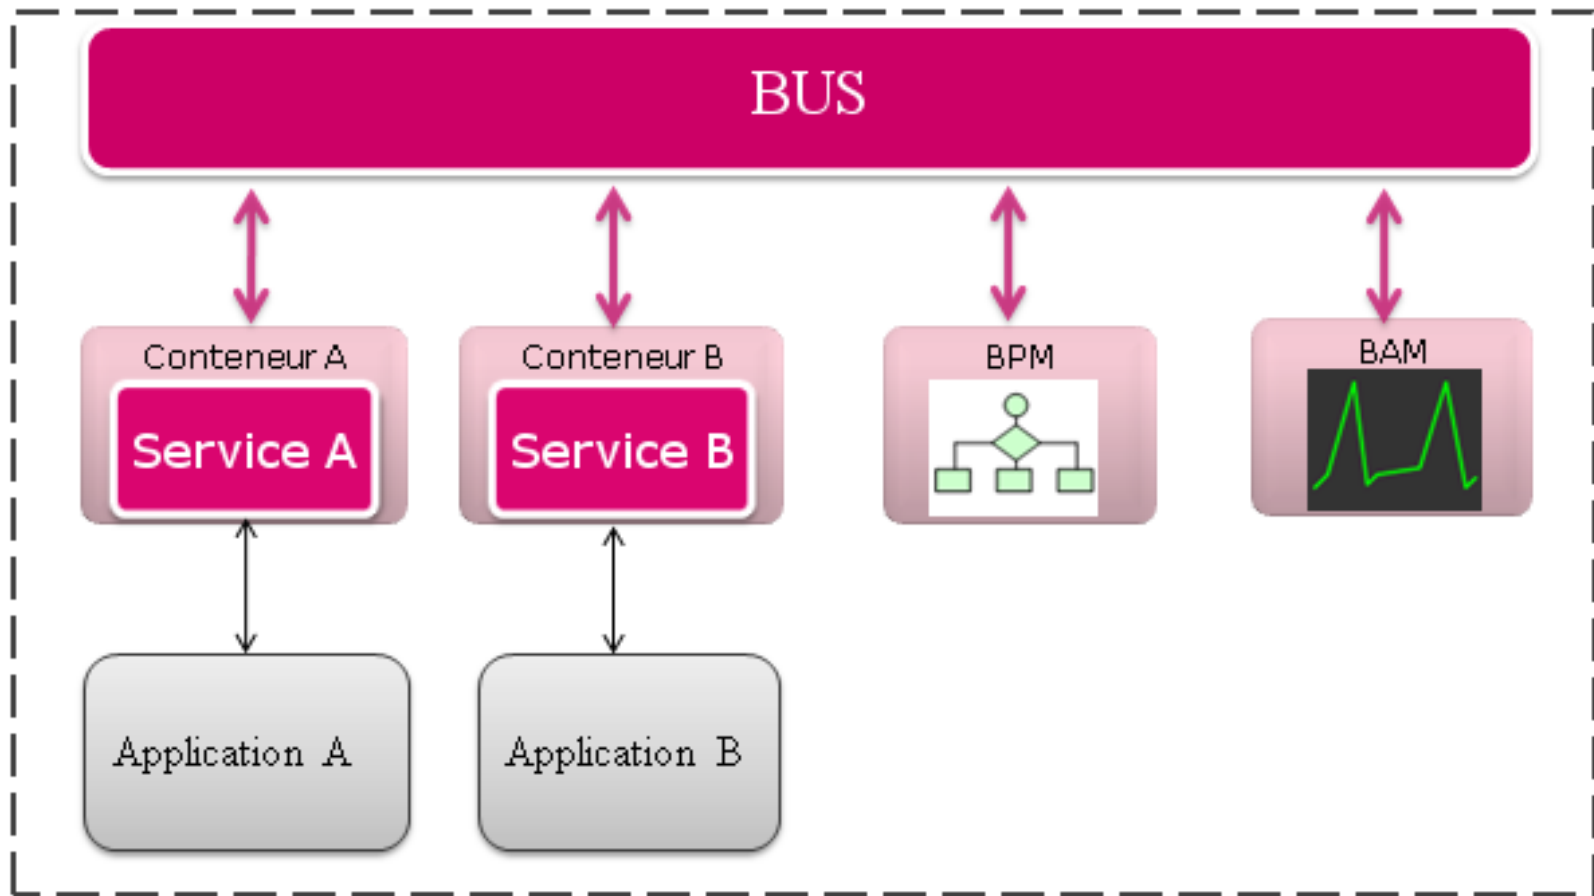

- Architecture permettant de décrire les communications inter-applications
- Lien avec la gestion de processus métier
- Intègre les concepts de WorkFlow et Bus

Enterprise Service Bus

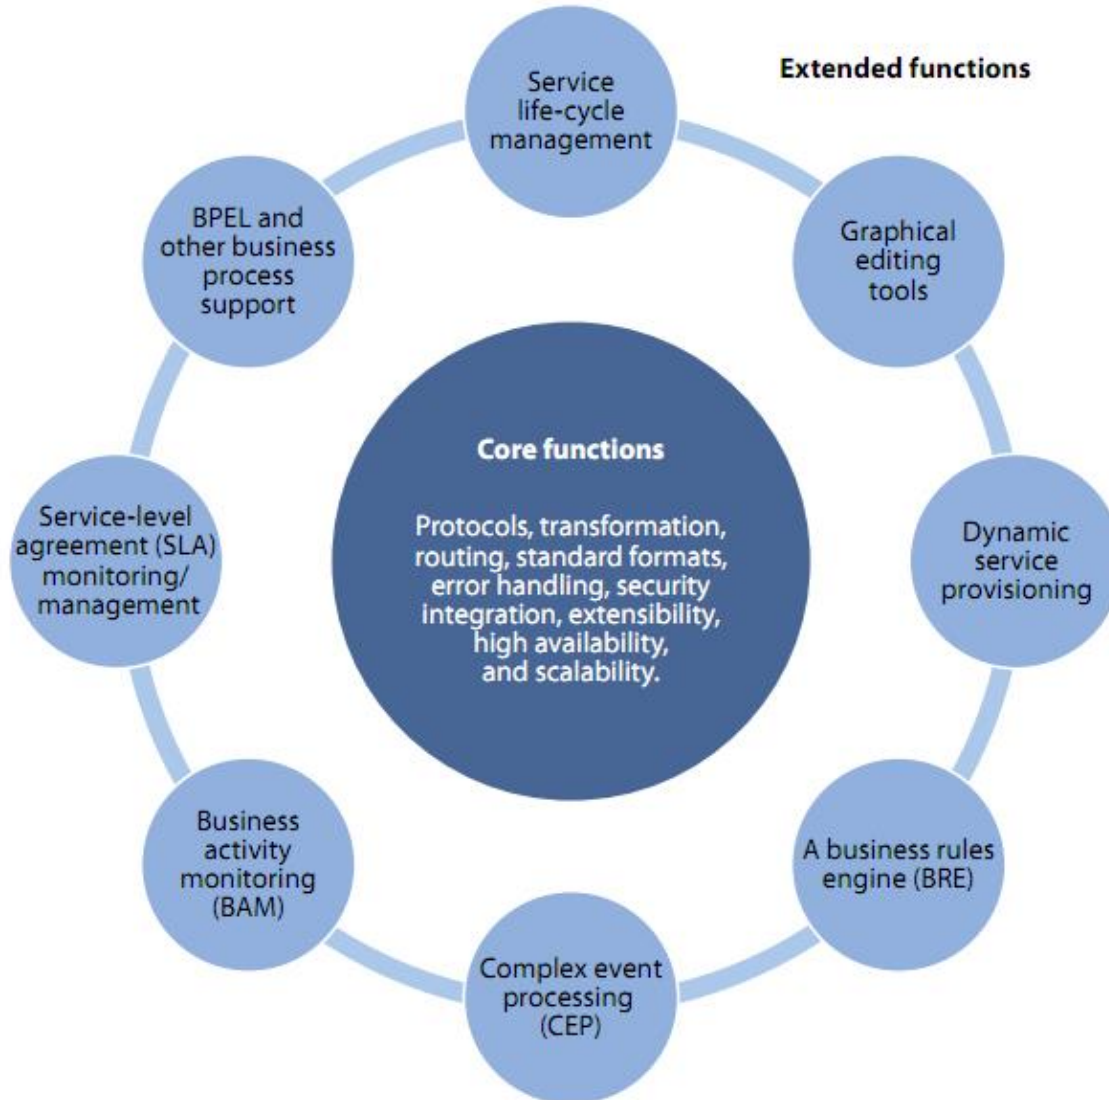

- Besoin d'intégration d'applications
- Ancêtres et concepts :
 - Message Oriented Middleware
 - Enterprise Application Integration
- Technologies :
 - Communication : Web Services
 - Représentation : XML
 - Messagerie : JMS, AMQP
 - Modularité : JBI, OSGi

http://blog.xebia.fr/wp-content/uploads/2007/10/les_esb_dans_la_soa.pdf

Enterprise Service Bus

Enterprise Service Bus

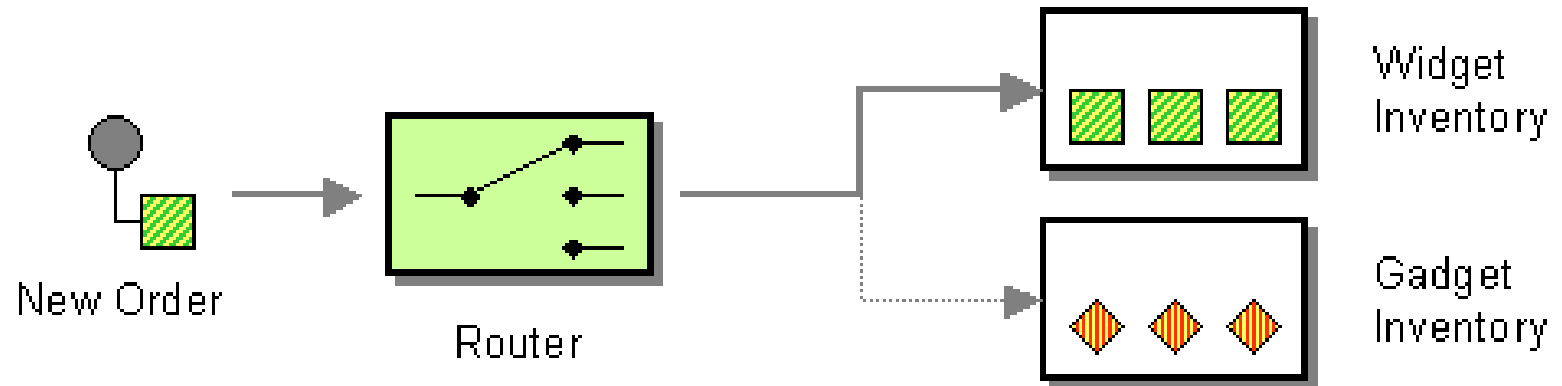

Enterprise Integration Patterns

Content Based Pattern

- Des commandes sont lues d'une file d'attente
- On veut diriger ces commandes en fonction de leurs types

Les ESB du marché

- Middleware complet
 - Oracle Enterprise Service Bus
 - TIBCO Spotfire
 - Talend ESB
 - JBoss ESB
 - MuleSoft Mule
 - OpenESB
- Middleware léger
 - Apache CAMEL
 - Spring Integration
 - Apache Synapse

Implémentation – Apache CAMEL

Apache CAMEL

Concise
Application
Messaging
Exchange
Language

Qu'est-ce que CAMEL

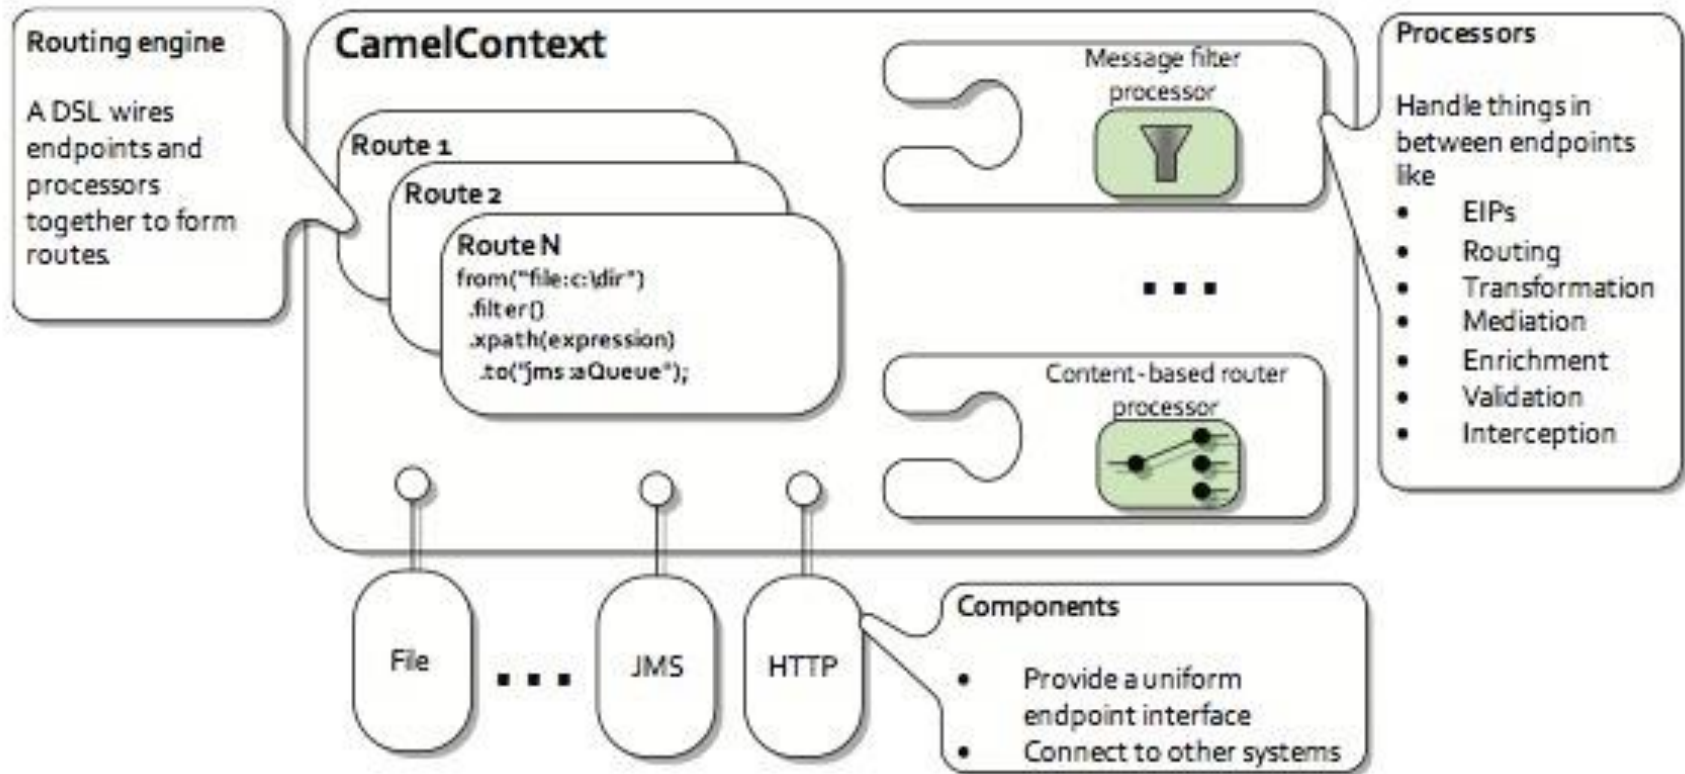

- Un lightweight ESB
- Une implémentation des patterns EIP

The logo for ServiceMix 4, featuring the text "ServiceMix 4" in a white, serif font with a slight glow effect, set against a blue rectangular background.The logo for ActiveMQ, featuring the text "ActiveMQ" in a bold, sans-serif font. "Active" is in a dark red color and "MQ" is in black. The text is set against a light gray, wavy background.

Comment écrire du CAMEL ?

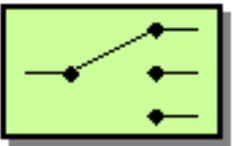

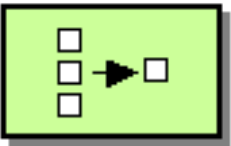

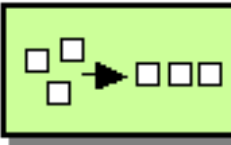

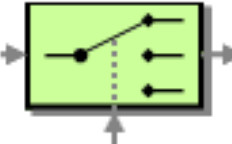

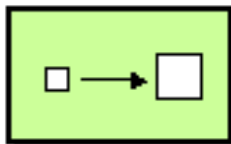

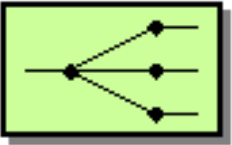

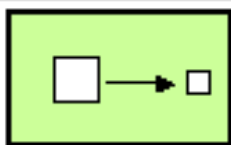

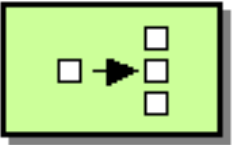

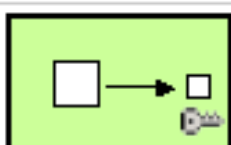

- Langage de représentation :
 - XML
 - Spring Beans XML
 - Java

Fonctionnement de CAMEL

Les patterns implémentés

<http://camel.apache.org/eip>

	Content Based Router		Aggregator
	Message Filter		Resequencer
	Dynamic Router		Content Enricher
	Recipient List		Content Filter
	Splitter		Claim Check

Content Based Pattern

- Des commandes sont lues d'une file d'attente
- On veut diriger ces commandes en fonction de leurs types

Content Based Pattern

```
from("activemq:NewOrders")  
  .choice()  
    .when().xpath("/order/product = 'widget'")  
      .to("activemq:Orders.Widget")  
    .otherwise()  
      .to("activemq:Orders.Gadget");
```

Un exemple (presque) complet

```
1 import org.apache.camel.Endpoint;
2 import org.apache.camel.Predicate;
3 import org.apache.camel.builder.RouteBuilder;
4 public class MyRoute extends RouteBuilder {
5     public void configure() throws Exception {
6         Endpoint newOrder = endpoint("activemq:queue:newOrder");
7         Predicate isWidget = xpath("/order/product = 'widget'");
8         Endpoint widget = endpoint("activemq:queue:widget");
9         Endpoint gadget = endpoint("activemq:queue:gadget");
10        from(newOrder)
11        .choice()
12        .when(isWidget).to(widget)
13        .otherwise().to(gadget)
14        .end();
15    }
16 }
```

Qu'est-ce que CAMEL

- Transforme l'intégration d'application en Lego
- Des **centaines** de composants
 - Twitter, CXF, Spring, XSLT, EJB...
- Des **dizaines** de formats de fichiers
 - CSV, SOAP, JAXB, JSON, ZIP...
